A Guide to Digital TV

- **What is Digital Television?**
  Digital television (DTV) is a new way of transmitting high quality video and audio to your TV set. Using DTV, broadcasters can transmit high definition TV (HDTV) images, Dolby digital surround audio, and new services such as multicasting (transmitting more than one program on the same TV channel) and datacasting. Several of these services can be combined into a single digital broadcast.

Digital Television Services

- **Digital Picture Quality**
  DTV programs are transmitted in two different formats. The first is Standard Definition Television (SDTV) and the second is High Definition Television (HDTV).

- **SDTV** program formats include 480-line interlaced (480i) and 480-line progressive (480p) video. 480i programs are essentially a digital version of our current analog TV programs, while the 480p format offers improved image detail over 480i. Some 480p programs are broadcast in widescreen and are comparable to progressive-scan DVD movies in image quality.

- **HDTV** program formats include 1080-line interlaced (1080i) and 720-line progressive (720p). Both HDTV formats are always broadcast in widescreen, and offer much higher picture quality than SDTV.

- **Dolby Surround Sound**
  With DTV, you can listen to a variety of Dolby digital audio formats from Dolby Surround 2.0 to Dolby Digital 5.1 surround, using your home audio system. Many HDTV programs are now broadcast with DD 5.1 soundtracks.

U.S.A Only

Other countries

CableCARD and Digital Cable Ready TVs

CableCARD and Digital Cable Ready TVs are the products of a new digital cable standard.
This new standard is called OpenCable and it is a concerted effort to standardize the digital cable service network interface in North America. For more information, please refer to www.cablelabs.com.

Digital Cable Ready TVs are equipped with a proper digital cable tuner to receive digital cable signals from your local cable service provider. They are also designed to work with digital cable card modules (PCMCIA card modules called CableCARDs). These PCMCIA card modules or CableCARDs will be provided by your local cable service provider after a proper subscription process.

The provided CableCARD from your local cable service provider needs to be inserted into the CableCARD slot of a Digital Cable Ready TV. Please refer to page 21 for how to insert the CableCARD. A digital set-top box which used to be provided by the cable service provider is no longer needed with Digital Cable Ready TVs and CableCARDs.

When CableCARD is inserted into the slot, the TV screen will show the message that CableCARD is inserted and tries to download necessary data such as channel information or subscription information from your digital cable service provider. When you insert CableCARD for the first time, this process may take a few minutes depending on the amount of data your cable provider needs to send. During this process the digital cable service provider or CableCARD may display messages on the TV screen to help or give you further information.

Please contact your local cable provider for more information on service availability and how to acquire a CableCARD.

NOTE

- *This television receiver supports the copy protection system regulated by DTLA (Digital Transmission Licensing Administrator). It should be noted that copy protected content may not be viewable depending on your particular connections.*

Q&A

1. Is the antenna I use for existing TV reception good enough for DTV?
Over-the-air (OTA) digital TV broadcasting uses the same channels as analog TV and works well with many existing TV antennas. However, DTV broadcast channel assignments are different than analog channels. You should find out whether your local DTV broadcasts are on VHF (channels 2-13) or UHF (channels 14-69) to see if you need a different antenna.

If your DTV channels are on UHF and you already get good UHF reception, your present antenna may work fine. The same holds true for VHF DTV reception. Note that in some markets, both VHF and UHF channels are used for DTV broadcasts.

You can find out the latest DTV channel assignments for your area by browsing selected Internet web sites such as www.titantv.com, www.10000watts.com, and www.fcc.gov.

2. How difficult is it to receive DTV signals indoors?
This depends on whether your local DTV stations are running full power or not and how close your location is to the transmission tower. DTV receivers do not require as much signal as analog TV receivers to produce high-quality images and sound.

Once the DTV signal level exceeds a certain threshold at the receiver, the digital video and audio data is decoded at the same quality it was originally encoded for broadcast.
This is a big advantage for DTV over analog TV - there is no noise, ghosting, static, or scratchy audio.

3. How can I connect an antenna in my townhouse, co-operative apartment, condominium, or apartment?
The Federal Communications Commission's OTARD Rule (part of the Telecommunications Act of 1996) allows residents of condominiums, townhouse, or members of neighborhood associations to put up outside antennas for reception of broadcast TV signals as long as those antennas are not located in common areas and are no more than 12' in height.

Residents of rental units (apartments, etc.) are not covered by the OTARD rules and will have to use indoor antennas to receive DTV broadcasts. It is possible that the landlord of an apartment complex can provide broadcast DTV signals via a master TV antenna system to each apartment.

4. Can I connect my DTV set-top receiver to my cable TV service?
Cable TV systems use a different method for transmitting digital TV programs that is currently incompatible with broadcast DTV set-top receivers. So you will still need to use an outdoor or indoor antenna to receive OTA broadcast DTV programs.

The good news is that you won't have to pay a monthly or per-program charge to watch OTA DTV and HDTV programs. They're free, unlike subscription satellite TV or premium cable TV. All you need is an antenna and a DTV set-top receiver to enjoy clear, sharp widescreen images and high-quality audio.

5. I hear a Clicking sound in standby mode.
You will hear the sound if you have set both ANTENNA (Air) and Cable to "Yes" in the TV Guide On Screen™ Setup.
However, do not worry about this since the sound comes from inside your TV while it receives data for your TV Guide.

Viewing Position

To optimize your viewing comfort, please follow the guidelines below for viewing distance.
If viewing for an extended period of time, sit as far back from the screen as possible.

<Top view>

70º

70º

56" screen:
At least 6.6 feet

<Side view>

30º

30º

56" screen:
At least 6.6 feet
When installing the product, make sure to keep it away from the wall (more than 10cm/4 inches) for ventilation purposes.
• Poor ventilation may cause an increase in the internal temperature of the product, resulting in a shortened component life and degraded performance.
List of Features

Your TV was designed and engineered using the latest technology. It is a full-featured, high-performance unit that exceeds industry standards. In addition, it has these special features:

- Easy-to-operate remote control
- Easy-to-use on-screen menu system you can access from the front panel or remote control
- Automatic timer to turn the TV on and off at any time you choose
- Adjustable picture and sound settings and the ability to memorize your favorite settings
- Automatic channel tuning for up to 181 channels
- A special filter to reduce or eliminate reception problems
- Fine tuning control for the sharpest picture possible
- A built-in multi-channel sound decoder for stereo and bilingual listening
- Built-in, dual channel speakers
- A special sleep timer
- Picture-in-Picture capability that lets you watch two channels at once
- Widescreen TV with adjustable image size
- Life-like clear images provided by DNIe technology
- My Color Control Mode for corresponding with your color preference
- Color weakness Mode
- Digital Input (HDMI/DVI IN) jack
- Digital Audio Output (OPTICAL) jack
- AV network system (Anynet) that enables you to easily control Samsung audio-video(AV) devices from this TV.
- CableCARD slot
- D-Net (IEEE1394)
- TV Guide On Screen™

Accessories

Once you have unpacked your TV, check to make sure that you have all the parts shown here.
If any piece is missing or broken, call your dealer.
| Remote Control (BP59-00071B)/ AAA Batteries | Warranty Card/ Registration Card/ Safety Guide Manual/ Quick Guide Manual/ Anynet Manual | Owner's Instructions | Anynet Cable (BN39-00518B) | G-LINK™ Cable (MD96-00036A) | Cloth-Clean |

Front Panel Buttons

The buttons on the front panel control your TV's basic features, including the on-screen menu system. To use the more advanced features, you must use the remote control.

Standby state.
(Standby indicator; Red) ── STANDBY ● TIMER ── Auto timer on has been set.
(Timer indicator; Green)

Press and hold the POWER button for a few seconds to turn the TV on or off. ── POWER SOURCE ── Press to switch between viewing TV programs and signals from connected components.

Press to lower or raise the volume and to select items when using the on-screen menu. ── ⊕ ⊝ VOL ⊖ CH ⊝ ── Press to change channels and to move between items on the on-screen menu.

Press to see the on-screen menu. ── MENU ⤶ ── Press to activate (or change) a particular item.

NOTE

- *Touching the control panel using your finger will cause Blue LEDs to light for all buttons. You can then locate the desired button and touch it to operate the desired function.*

── Aim the remote control towards this spot on the TV.

Front Panel Information Window
The Information window appears as illustrated above while the TV is turning on. When successfully turned on, an animated "Smile" figure appears and then fades out slowly.
Appears while the TV is turning off.

When these indicators appear, there is a possible problem with the TV.

Lamp or other component may be defective. Please contact a certified technician.

Check if the ventilation hole on the rear of the set is blocked, because if the inner temperature is too high, the power will shut off.

A cooling fan inside the set is not operating normally.

The TV's rear cover is not properly shut.

NOTES

- *It takes about 30 seconds for the TV to warm up, so normal brightness may not appear immediately.*
- *The TV has a fan to keep the inside lamp from overheating. You'll occasionally hear it working.*

Your New Wide TV

Rear Panel Jacks

Use the rear panel jacks to connect components such as a VCR. You can connect different components such as VCRs, Set-Top Box and a DVD player etc., because there are two sets of video input jacks and two sets of component video input jacks on the rear panel of your TV.
For more information, see "Connections".
❶ ANTENNA terminals
Two independent cables or antennas can be connected to these terminals. Use "ANT1 IN(CABLE)" and "ANT2 IN(AIR)" terminals to receive a signal from VHF/UHF antennas or your cable system. (Refer to pages 18~19)

❷ S-VIDEO INPUT jacks
Connects an S-Video signal from an S-VHS VCR or DVD player. (Refer to pages 20 and 22)

❸ VIDEO/AUDIO INPUT jacks
Connect video/audio signals from external sources, such as VCR or DVD players. (Refer to page 23)

❹ VIDEO/AUDIO OUTPUT jacks
Sends video/audio signals from the TV to an external source, such as a VCR. These jacks are available only in RF, Video and S-Video modes.

❺ COMPONENT1, 2 jacks (Y, P$_B$, P$_R$, AUDIO L/R)
Use these jacks to connect the component video/audio signals from a DVD player or a Set-Top Box. (Refer to pages 23~24)

❻ DVI AUDIO IN (AUDIO L/R)
Connect to the DVI audio output jack of an external device.

❼ PC AUDIO INPUT jacks
Connect these to the audio output jacks on your PC. (Refer to page 128)

❽ SUB-WOOFER OUT jack
Connect to an active SUB-WOOFER. (Refer to page 27)

❾ Anynet
Please refer to the Anynet Owner's Instruction. This jack is for connecting to other Samsung Anynet-enabled devices.

❿ RS232C
Connect to a computer for reading and loading data information.

⓫ DIGITAL AUDIO OUT (OPTICAL) jack
Connect to a Digital Audio Component. (Refer to page 26)

⓬ PC VIDEO INPUT jack
Connect these to the video output jack on your PC.

⓭ HDMI (High Definition Multimedia Interface)/ DVI INPUT jack (HDMI IN 2/DVI IN)
Connect to the HDMI jack of a device with HDMI output. These inputs can also be used as a DVI connection with separate analog audio inputs. An optional HDMI/DVI cable will be necessary to make this connection. When using the optional HDMI/DVI adapter, the DVI analog audio inputs on your TV allow you to receive left and right audio from your DVI device. (Not compatible with PC) (Refer to pages 24~25)

⓮ HDMI (High Definition Multimedia Interface) INPUT jacks (HDMI IN 1)
Connect to the HDMI jack of a device with HDMI output. (Not compatible with PC)

⓯ D-Net (IEEE1394) S400 MPEG
Connect to external IEEE1394 digital products such as digital VCRs and camcorders.
Two jacks are provided for this purpose, which allow for a high degree of flexibility for connecting your D-Net controlled system.

⓰ SERVICE
This jack is for software upgrades.

⓱ CableCARD™
Insert the CableCARD into the slot. (Refer to page 21)

⓲ G-LINK™
Connect the IR controller cable to the G-LINK™ terminal on your TV. (Refer to page 104)

Remote Control

You can use the remote control up to about 23 feet from the TV. When using the remote control, always point it directly at the TV. You can also use your remote control to operate your VCR, Cable box, DVD player or some Samsung Set-top boxes. See pages 36~37 for details.

1. POWER
Turns the TV on and off.

2. TV Guide
Press to display the TV Guide On Screen™ Interactive Program Guide (IPG).
(Refer to the TV Guide On Screen™ manual and TV Guide On Screen™ Quick Setup Sheet for further information on G-LINK™.)

3. ANTENNA
Press to select "AIR" or "CABLE".

4. CHANNEL NUMBER
Press to directly tune to a particular channel.

5. –
Press to select additional channels (digital and analog) being broadcast by the same station. For example, to select channel "54-3", press "54", then press "–" and "3".

6. VOL +, VOL –
Press to increase or decrease the volume.

7. MUTE
Press to mute the TV sound.

8. Anynet
Runs the Anynet view functions and sets up Anynet devices.

9. MENU
Displays the main on-screen menu.

10. CH.LIST
Displays the channel list.

11. FAV.CH (Favorite Channel)
Press to switch between your favorite channels.

12. MODE
Selects a target device to be controlled by the Samsung remote control (i.e., TV, STB, VCR, CABLE, or DVD).

13. PRE-CH
Tunes to the previous channel.

14. SOURCE
Press to display all of the available video sources (i.e., TV, Set-Top Box, VCR, DVD, DTV, PC).

15. CH/PAGE ∧/∨
Press to change channels. Moves from one set of screen information to the next in the TV Guide On Screen™.

16. INFO
Press to display information on the TV screen.

17. EXIT
Press to exit the menu.

18. ▲, ▼, ◄, ►, ENTER
Press to select highlight up, down, left, or right. While using the on-screen menus, press ENTER to activate (or change) a particular item.

19. D-Net
Runs the D-Net view function.
(Refer to pages 112~126)

20. PIP (Picture In Picture)
Displays the available channels in sequence. (These buttons change channels in the PIP window only.)
When in the TV Guide On Screen™, mode toggles between locked and unlocked in the Video Window.

21. STILL
Press to pause the current screen.

22. P.SIZE
Press to change the screen size.

23. REC
Records a program in the TV Guide On Screen™.

24. DNIe (Digital Natural Image engine)
Activates DNIe Demo mode.

25. SET
Used during set up of this remote control, so that it will work compatibly with other devices (some Samsung Set-top boxes, VCR, Cable box, DVD, etc.)

26. MTS (Multichannel Television Stereo)
Press to choose Stereo, Mono or SAP (Secondary Audio Program).

27. PIP Controls
CH∧/∨: Press to display the available channels in sequence. (These buttons change channels in the PIP window only.)

28. CAPTION
Controls the caption decoder.

29. ◄◄/Day-, Day+/►►
Moves forward or backwards in 24 hour increments in the Listings Grid in the TV Guide On Screen™.

30. VCR/DVD Controls
Controls VCR or DVD functions: Rewind, Stop, Play/Pause, Fast Forward.

31. RESET
If your remote control is not functioning properly, take out the batteries and press the reset button for about 2~3 seconds. Re-insert the batteries and try using the remote control again.
NOTE
• *If you are using a cable box, the TV Guide On Screen™ system needs to be able to change channels on your cable box to download program listings when the TV is not in use.*
Please connect the supplied G-LINK™ cable to the G-LINK™ jack of the TV. After you connect the G-LINK™ cable you will be able to control your cable box using the TV's remote.
(Refer to the TV Guide On Screen™ Quick Setup Sheet for further information on G-LINK™.)

Your New Wide TV

Installing Batteries in the Remote Control

With normal use, the batteries in the remote control should last about a year. If you notice a performance degradation while using the remote, the batteries may need to be replaced. Make sure you replace both batteries and do not mix old and new batteries in the remote control. If you won't be using the remote control for a long time, remove the batteries and store them in a cool dry place.

1   Slide the back cover all the way out to open the battery compartment of the remote control.
2   Install two AAA size batteries. Make sure to match the "+" and "–" ends of the batteries with the diagram inside the compartment.
3   Slide the cover back into place.
NOTE
• *Do not mix battery types, i.e, alkaline and manganese.*

Connections

Connections

Connecting VHF and UHF Antennas

If you do not have a cable system, you will need to connect an antenna to your TV.

Antennas with 75-ohm Round Leads

If your antenna looks like this: ▬▬▬◻️▭ it has 75-ohm round leads.

1   Plug the antenna lead into the ANT2 IN (AIR) on the rear panel of your TV.
Connecting Cable TV

You can connect different cable systems to your TV, including cable without a Cable box, and cable with a Cable box that descrambles some or all channels.

Cable without a Cable Box

1 Plug the incoming cable into the ANT1 IN (CABLE) on the rear panel of your TV.
Cable with a Cable Box that Descrambles All Channels

1 Find the cable connected to the ANTENNA OUT terminal on your Cable box. This terminal might be labeled "ANT OUT", "VHF OUT" or simply "OUT".

Cable Box
2 Connect the other end of the cable to the "ANT1 IN (CABLE)" terminal on the rear panel of your TV.
Connections

Connecting a VCR

Connecting a VCR to the Video or S-Video/Audio jack

1 Connect the Video/Audio
cables between the VIDEO
or S-VIDEO/AUDIO input
jacks on the TV and VIDEO
or S-VIDEO/AUDIO output
jacks on the VCR.

2 Connect a coaxial cable
between the Antenna out
terminal (i.e., "OUT to TV")
on the VCR and the ANT 1
IN (CABLE) on the TV.

3 Connect a video cable
between the S-VIDEO IN
jack on the TV and the
S-VIDEO OUT jack on the
VCR.

NOTES

- *For better video, use an
S-Video cable.*
- *Please be sure to match the
color coded input terminals
and cable jacks.*
- *When connecting the VCR
and turning it on, there may
be some degradation of the
visual quality with noise on
the TV screen.*

  *Press the TV/VCR button on
the VCR remote control first
to switch the VCR to the TV
mode and you can tune the
TV while the VCR is recording.*

Alternate method

When changing the antenna
connection, you do not need to
press the TV/VCR button on the
VCR remote control for using the
recording function of the TV Guide
On Screen™.

Cable CARD™

Please insert the
card as shown.
Connections

Connecting a Camcorder

You can use your camcorder to view tapes without using a VCR.

1 Locate the A/V output jacks on the camcorder. They are usually found on the side or back of the camcorder.

2 Connect a video cable between the VIDEO IN (or S-VIDEO IN) jack on the TV and the VIDEO OUT jack on the Camcorder. The audio-video cables shown here are usually included with a Camcorder. (If not, check your local electronics store.) If your Camcorder is stereo, you need to connect a set of two cables.

3 Connect a set of audio cables between the AUDIO IN jacks on the TV and the AUDIO OUT jacks on the camcorder. If you have a mono Camcorder, connect L(mono) to the Camcorder audio out using only one audio cable.
Connecting a DVD Player

The rear panel jacks on your TV make it easy to connect a DVD player to your TV.

Connecting to Y, P$_B$, P$_R$

1 To enable Component video viewing, connect a set of video cables between the COMPONENT (1 or 2) VIDEO (Y, P$_B$, P$_R$) IN jacks on the TV and VIDEO (Y/P$_B$/P$_R$ or Y/C$_B$/C$_R$) OUT jacks on the DVD player.

2 Connect a set of audio cables between the COMPONENT (1 or 2) AUDIO (L, R) IN jacks on the TV and the AUDIO OUT jacks on the DVD player.

TV Rear Panel
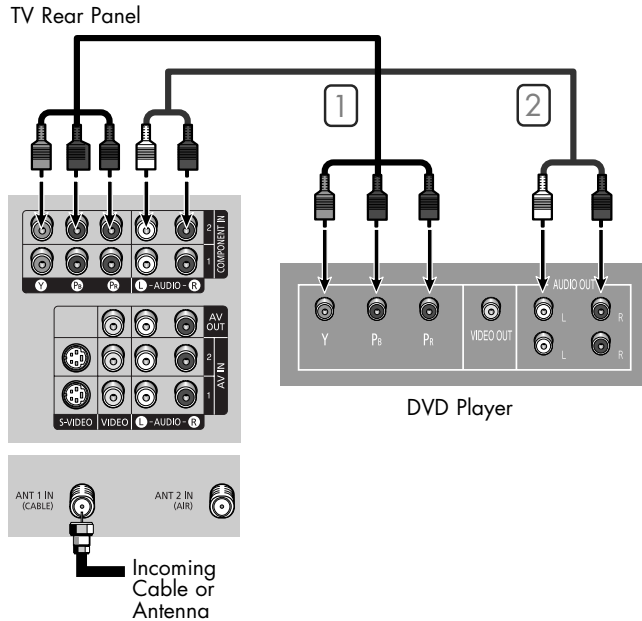

DVD Player

Connecting to Audio and Video Jacks

1 Connect a video cable between the VIDEO IN (1 or 2) jack on the TV and the VIDEO OUT jack on the DVD player.

2 Connect a set of audio cables between the AUDIO IN (1 or 2) jacks on the TV and the AUDIO OUT jacks on the DVD player.

TV Rear Panel
DVD Player

NOTE
- *For an explanation of Component video, see your DVD player's owner's manual.*

Connections

Connecting a DTV Set-Top Box

Connecting to Y, P$_B$, P$_R$

1 Connect a set of Component cables between the COMPONENT (1 or 2) VIDEO (Y, P$_B$, P$_R$) IN jacks on the TV and VIDEO (Y/P$_B$/P$_R$ or Y/C$_B$/C$_R$) OUT jacks on the Set-Top Box.

2 Connect a set of audio cables between the COMPONENT (1 or 2) AUDIO (L, R) IN jacks on the TV and the AUDIO OUT jacks on the Set-Top Box.

3 Connect the Video/Audio cables between the VIDEO or S-VIDEO/AUDIO input jacks on the TV and VIDEO or S-VIDEO/AUDIO output jacks on the Set-Top Box.

4 Connect a coaxial cable between the Antenna out terminal (i.e., "ANT.OUT") on the Set-Top Box and the ANT 1 IN (CABLE) on the TV.

TV Rear Panel

Incoming Cable or Antenna

Connecting a Digital Audio System

There are many types of digital audio systems on the market today.
A simplified illustration of an audio system is shown below. For more information, see your audio system owner's manual.

1
If your audio system has an optical digital audio input, connect to the "DIGITAL AUDIO OUT(OPTICAL)" jack on the TV.

NOTE

- *OPTICAL: converts the electric signal into an optical light signal, and transmits it through glass fibers. A transmission system of digital audio in the form of a light wave, S/PDIF format using a glass conductor. See page 82 to set the digital output format (Dolby Digital or PCM) appropriate to your digital audio component.*

TV Rear Panel

Audio System
Connecting to an Analog Amplifier

1
The "AV OUT (AUDIO L/R)" terminals cannot be used for external speakers.
You must hook them up to an amplifier.

When an audio amplifier is connected to the "AV OUT (AUDIO L/R)" terminals: Decrease the gain (volume) of the audio amplifier, turn the TV's internal mute on and adjust the volume level with the volume control of the amplifier.

NOTE

- *If using the HDMI/DVI, PC, or Component input on the TV, the audio output signal is available only when the TV's Internal Mute is set to on.*
  (Refer to page 83)

TV Rear Panel
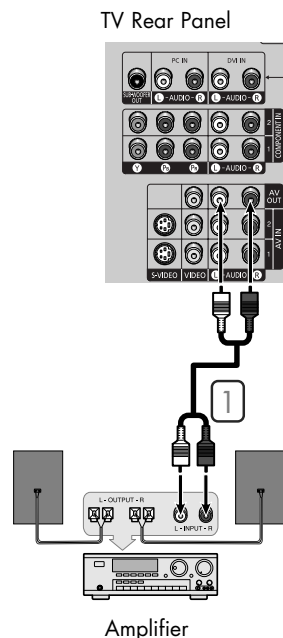

Amplifier

Connecting to a Subwoofer Speaker

1 Connect a powered subwoofer to the SubWoofer jack on the TV using the subwoofer cable.

2 To use a passive subwoofer, connect an amplifier and use referring to the connection procedures described in "Connecting to an Analog Amplifier".

NOTE
- *Powered subwoofer: This is a subwoofer with a built-in amplifier.*
- *Passive subwoofer: This is a subwoofer without a built-in amplifier. You have to install an additional amplifier and connect to the the subwoofer.*

Operation

Operation

Turning the TV On and Off

Press the POWER button on the remote control.
You can also use the POWER button on the front panel.
"When turning the TV on for the first time, the TV Guide screen will be displayed.
For more information, refer to the TV Guide Manual."

Viewing the Menus and On-Screen Displays

The on-screen menu system allows you to control the settings of your TV. Access the on-screen menu system by pressing the MENU button on the remote control. Once the on-screen menu appears, use the ▲/▼/◄/►/ENTER buttons on your remote control to select menu items and make adjustments. You can also view the on-screen menu system and make some adjustments using the TV's front panel buttons.
Viewing the Menus

1 Press the MENU button. The main menu is displayed. There are six menu groups: "Input", "Picture", "Sound", "Channel", "Setup", and "Listings".

Operation

Memorizing the Channels

Your TV can memorize and store all of the available channels for both "off-air" (antenna) and cable channels. After the available channels are memorized, use the CH/PAGE ⌃ and CH/PAGE ⌄ buttons to scan through the channels. This eliminates the need to change channels by entering the channel digits. There are three steps for memorizing channels: selecting a broadcast source, memorizing the channels (automatic) and adding and deleting channels (manual).

Selecting the Video Signal Source

Before your television can begin memorizing the available channels, you must specify the type of signal source that is connected to the TV (i.e., an antenna or cable system).

1 Press the MENU button.
Press the ▲ or ▼ button to select "Channel", then press the ENTER button.

TV	Channel
Input	Antenna : Air ▶
Picture	Auto Program ▶
	Add/Delete ▶
Sound	Channel List ▶
	Favorite Channels ▶

	◆ Move ⤶ Enter ▥ Return
- STD, HRC and IRC identify various types of cable TV systems.
  Contact your local cable company to identify the type of cable system that exists in your particular area.
  At this point the signal source has been selected.

5 Press the ► button to select "Start", then press the ENTER button to start the auto program. The TV begins memorizing all available stations. Press the ENTER button at any time to interrupt the memorization process.
Press the EXIT button to exit.

- The TV must be connected to an antenna in order to receive digital TV signals. Even if a particular channel is deleted from the memory, you can always tune to that channel directly by using the number buttons on the remote control.

[Delete]
Move   ⏎ Enter   ▥ Return
Changing Channels

Using the Channel Buttons

Press the CH/PAGE ∧ or CH/PAGE ∨ button to change channels.

When you press the CH/PAGE ∧ or CH/PAGE ∨ button, the TV changes channels in sequence.
You will see all the channels that the TV has memorized.
(The TV must have memorized at least three channels.)
You will not see channels that were either erased or not memorized.

Using the Number Buttons

Use the number buttons to quickly switch to any channel.

Press the number buttons to go directly to a channel. For example, to select channel 27, press
"2," then "7." The TV will change channels when you press the second number.

Using the "−" Button

The "−" button is used to select stations that broadcast both a digital and analog signal.

For example, for channel 7-1
(digital), press "7", then "−",
then "1".

```
DTV Air
7-1

English

Picture Mode    Standard
Sound Mode      Standard
MTS             English
Caption         On
V-Chip          Off
12:00 am
```

For channel 7-2 (analog), press
"7", then "−", then "2".

```
Air 7-2

Mono

Picture Mode    Standard
Sound Mode      Standard
MTS             Stereo
Caption         On
V-Chip          Off
12:00 am
```

NOTE
• *HD indicates the TV is
receiving a Digital High
Definition signal.
SD indicates the TV is
receiving a Analog
standard definition
signal.*

Using the Previous Channel

Press the PRE-CH button.
The TV changes to the last channel you were watching.

Operation

Customizing Your Remote Control

Your TV comes equipped with a universal remote control. In addition to controlling the TV, the universal remote control can also operate a VCR, Cable box, DVD, and some Samsung Set-top boxes (even if your VCR, Cable box and DVD are made by manufacturers other than Samsung).

NOTE
- *The remote control might not be compatible with all DVD Players, VCRs, Cable boxes, and Set-Top Boxes.*
Setting Up Your Remote Control to Operate Your VCR (Cable box or DVD player)

1 Turn off your VCR (Cable box or DVD player).

2 Press the MODE button to switch the remote control to the VCR (CABLE or DVD) mode.
The remote control has five modes: TV, STB, VCR, CABLE, and DVD.

3 On your Samsung remote control, press the SET button.

4 Enter 3 digits of the VCR (Cable box or DVD player) code listed on next page for your brand of VCR (Cable box or DVD player). Make sure you enter 3 digits of the code, even if the first digit is a "0". (If more than one code listed, try the first one.)

5 Press the POWER button. Your VCR (Cable box or DVD player) should turn on. If your VCR (Cable box or DVD player) turns on, your remote control is now set correctly.
If your VCR (Cable box or DVD player) does not turn on, repeat steps 2, 3, and 4, but try one of the other codes listed for the brand of your particular VCR (Cable box or DVD player).

6 Once your remote control is set up, press the MODE button any time you want to use the remote to operate your VCR (Cable box or DVD player).

NOTES
- *When your remote is in the TV mode, the VCR (or DVD player) control buttons (REW, STOP, PLAY/PAUSE, and FF) will still operate your VCR (or DVD player).*
- *When your remote control is in the STB, VCR, CABLE, or DVD mode, the volume buttons still control your TV's volume.*

Channel Control

Checking the Digital-Signal Strength Digital

Unlike analog channels, which can vary in reception quality from "snowy" to clear, digital (HDTV) channels have either perfect reception quality or you will not receive them at all. So, unlike analog channels, you cannot fine tune a digital channel.
You can, however, adjust your antenna to improve the reception of available digital channels.
1 Press the MENU button. Press the ▲ or ▼ button to select "Channel", then press the ENTER button.

Sound Control

Sound Control

Sound Control

You can control and customize the sound levels and settings of the TV with the remote control.

Adjusting the Volume

Press the VOL+ or VOL– button to increase or decrease the volume.

Using the MUTE Button

At any time, you can temporarily cut off the sound.
Press the MUTE button on the remote control.
The message "Mute" is displayed and the sound cuts off.

To turn mute off, press the MUTE button again or press either the VOL+ or VOL– button.

Customizing the Sound

The sound settings can be adjusted to suit your personal preference. (Alternatively, you can use one of the automatic settings. See next page.)

1 Press the MENU button.
Press the ▲ or ▼ button to select "Sound", then press the ENTER button.

Special Features

Using the V-Chip

Access to channels and programs is controlled by a password (i.e., a 4-digit secret code that is defined by the user). The on-screen menu will instruct you to assign a password (you can change it later, if necessary).

How to Change Your Password

1 Press the MENU button.
Press the ▲ or ▼ button to select "Setup", then press the ENTER button.
Press the ▲ or ▼ button to select "V-Chip", then press the ENTER button.

Important Notes About Parental Locks

Explanation of the MPAA and TV (FCC) Rating Systems:

TV (FCC) Age-Based Ratings

TV-MA
Mature audiences only. This program may contain mature themes, profane language, graphic violence and explicit sexual content.

TV-14
Parents strongly cautioned. This program may contain sophisticated themes, sexual content, strong language and more intense violence.

TV-PG
Parental guidance suggested. The program may contain infrequent coarse language, limited violence, some suggestive sexual dialog and situations.

TV-G
General audience. It contains little or no violence, no strong language, and little or no sexual dialog or situations.

TV-Y7
Directed to older children. Themes and elements in this program may include mild physical or comedic violence, or may frighten children under the age of seven.

TV-Y
All children. The themes and elements in this program are specifically designed for a very young audience, including children from ages two – six.

TV (FCC) Content Category

V	Violence.
S	Sexual content.
L	Offensive language.
D	Dialog sexual innuendo.
FV	Fantasy or cartoon violence.

MPAA Rating System (Movies)

G	General audience. No restriction.
PG	Children under 13 should be accompanied by an adult.
PG-13	Parental guidance suggested. Children under 13 should be accompanied by an adult.
R	Restricted. Viewers should be 17 or older.
NC-17	Not classified. Viewers should be 17 or older.
X	Adults only.
NR	Not rated.

- TV (FCC) ratings : The particular rating that you have selected will be locked (and indicated as a red "L" on a blue background). Also, all of the age-based ratings will be locked within the particular group (i.e., "group 1" or "group 2"). Suppose that the TV-G rating and all of its contents (V, S, L, and D) are locked. In that case, more restrictive ratings (TV-PG, TV-14, and TV-MA) and all of their contents (V, S, L, and D) are automatically locked as well.

- MPAA ratings : The particular rating that you have selected will be locked. In addition, more restrictive ratings will be locked as well.

- Neither TV (FCC) ratings nor MPAA ratings apply to news programs.

NOTES

• *The default is "CC1".*

  CC1 : The Primary Synchronous Caption Service. These are captions in the primary language that must be in sync with the sound, preferably matched to a specific frame.

  CC2 : The Special NonSynchronous Use Captions. This channel carries data that is intended to augment information carried in the program.

  CC3 : Secondary Synchronous Caption Service. Alternate program-related caption data, typically second language captions.

  CC4 : Special Non-Synchronous Use Captions. Similar to CC2.

  Text1 : First Text Service. This may be various non-program related data.

  Text2 : Second Text Service. Additional data, usually not program related.

  Text3/Text4 : Third and Fourth Text Services. These data channels should be used only if Text1 and Text2 are not sufficient.

• *The Caption feature only works in RF, AV and S-Video mode.*

• *The availability of captions depends on the program being broadcast.*

NOTES

- *Game mode is only available for AV1, AV2, S-Video1, S-Video2, Component1 and Component2.*
- *For Component input, Game mode only supports a resolution of 480i.*
- *Since selecting Anynet cancels Game mode, to play a game, select Game mode again.*
- *You cannot rename an input port to which an Anynet device is connected after setting Anynet.*
- *To set the game mode of the input port (Composite/ S-Video/Component), set Anynet again after connecting a game console.*

Restrictions on Game Mode (Caution)

- To Disconnect the game console and connect another external device, cancel Game mode in the Edit name menu.
- If you display the TV menu in Game mode, the screen shakes slightly.
- In Game mode, the TV Guide On Screen™ Reminder function does not work.

Disabled Menus in Game Mode

In Game mode, you will not be able to use the Input, Picture, Sound, Channel, Setup and Listings menus.

1. Input: Anynet and D-Net are disabled.
2. Picture: All functions are disabled except for the Contrast, Brightness and the Rest function of the P.Mode
3. Sound: Sound Select is disabled when Game mode is selected (because PIP is disabled)
4. Channel (Disabled regardless of Game mode)
5. Setup: Disabled when Game mode is selected - Caption, ColorWeakness, Menu Transparency, Function Help
6. Listings: (Disabled regardless of the Game mode selection)

Using TV Guide On Screen™
Turning the TV On and Off

Press the POWER button on the remote control.
You can also use the POWER button on the front panel.
When turning the TV on for the first time, the TV Guide screen will be displayed.

Reminder Screen

To make a selection, use the up or down arrow key to highlight an option, and press ENTER:

1   If you want to set up the TV Guide On Screen™ now, select "Set up TV Guide On Screen now". For more information, refer to INITIAL GUIDE SETUP in the TV Guide Manual.

2   If you want to set up TV Guide On Screen™ later and want the reminder screen to be displayed each time you turn your TV on, select "Remind me to set it up later".
This option will return you to watching TV.

3   If you don't want to set up TV Guide On Screen™ now and also don't want the reminder screen to be displayed each time you turn your TV on, select "Don't remind me again".
"Don't remind me again" will return you to watching TV and stops the reminder screen from appearing upon power On.
Even if you select "Don't remind me again" or close the screen by pressing the EXIT or TV Guide button, you can set up TV Guide On Screen™ any time you want by pressing the TV Guide button on your remote control.

NOTES

- Press the EXIT or TV Guide button on the remote control to close the Reminder screen without selecting any icon. The Reminder screen will disappear.

- In order for the Guide to receive channel lineup& listings successfully, "Auto Program" must be performed at least once, prior to powering off your TV. The Guide displays the very channels that are programmed during "Auto Program".

- Once you set up TV Guide On Screen™, the TV Guide will be displayed each time you power your TV on. If this bothers you, you can make a change to the factory default (AUTO GUIDE) so that the TV Guide will be displayed only when you press the TV Guide button on the remote control by following the steps below.
  1. With the TV Guide On Screen™ displayed on your TV, highlight SETUP in the TV Guide menu then press the ENTER button.
  2. Highlight Change default options then press the ENTER button.
  3. Highlight General defaults then press the ENTER button.
  4. Highlight Auto Guide then press the left or right arrow key to select "Off".
  5. Highlight done then press the ENTER button.
- Refer to TV Guide On Screen™ manual for details.

English - 109

Special Features

Using TV Guide On Screen™ (continued)

To activate TV Guide On Screen™ feature, follow the instructions below.
1 Press the MENU button. Press the ▲ or ▼ button to select "Listings", then press the ENTER button.

2 Press the ENTER button to select "TV Guide On Screen™".

- If you decide not to setup the Guide now, this reminder screen will appear each time you power On the TV (except if you selected "Don't remind me again").

Press the EXIT button to exit.

NOTES
- *In order for the Guide to receive channel lineup & listings successfully, "Auto Program" must be performed at least once, prior to powering off your TV. The Guide displays the channels that are programmed during "Auto Program".*
- *Refer to TV Guide On Screen™ manual for details.*

Using the D-Net

Using the D-Net

What's D-Net?

This refers to a home network consisting of devices supporting D-Net (IEEE1394) connections (such as digital VCRs and Set-Top Boxes) for digital audio and video data.

The D-Net (IEEE1394) standard for the High Performance Serial Bus is a serial data transfer protocol and interconnection system.
D-Net (IEEE1394) interface is capable of supporting various high-end digital A/V applications, such as A/V device control and signal routing, Digital Video (DV) editing, home networking.

How to connect compatible IEEE1394 Devices

Connecting compatible IEEE1394 devices is simple using this TV equipped with IEEE1394.
A secure digital interface is provided to other digital home entertainment units, such as a DTV, a Set-Top Box, an AVHDD, a digital VCR, a MPEG Camcorder.

1 Connect the IEEE1394 cable from the jack of the component with IEEE1394 capability, such as a Set-Top Box or a Digital VCR to the IEEE1394 jack on the TV.

2 Press the D-Net button on the Remote Control.

3 Select the D-Net (IEEE1394) Compatible device.

TV Rear Panel

IEEE1394 cable

Digital VCR (D-VHS)
NOTES

- *To access D-Net (IEEE1394) in the menu, see page 117.*
- *The IEEE1394 interface is equipped with a copy protection standard called Digital Transmission Content Protection (DTCP).*
- *The name of 1394 Jack may be different according to their manufacturer (i.e., DTV LINK or i.LINK).*
- *The supported video format is MPEG-2 Digital video. Other digital video formats (e.g. DV format...) are not supported.*
  For audio, Dolby Digital and MPEG Digital Audio are supported, other digital audio formats (e.g. MP3, DTS) are not supported.
- *Because IEEE1394 is an evolving technology, it is possible that some or all of the connectivity features of a device you connect to the TV through the IEEE1394 port may not operate.*
- *There may be a single IEEE1394 jack depending on the specifications of the external device.*
- *If only a single IEEE1394 jack is supported, connect the cable to the last jack.*

When Connecting D-Net (IEEE1394) Compatible devices

1 The last device in the chain may not be looped back to the TV as the TV may not be able to work with the other devices.
To connect two or more D-Net (IEEE1394) Compatible devices, follow the diagram below.

A maximum 10 D-Net (IEEE1394) Compatible devices can be connected.

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable
IEEE1394 cable

Do not connect D-Net (IEEE1394) Compatible devices in a way that creates a loop.

IEEE1394 cable

IEEE1394 cable

IEEE1394 cable
IEEE1394 cable

NOTE
- *IEEE1394 cables longer than 14.76 feet (177.16 inches) should not be used between devices.*

Using the D-Net

Connection Options

There are two different connection options for connecting D -Net (IEEE1394) compatible devices. Select the most suitable option according to your network of audio/video products.

The Direct Device-To-Device Option

D-Net (IEEE1394) permits the chaining of devices, unlike analog audio and video connection where each device needs to be individually connected to the TV. This allows you to connect your D-VHS to your 1394 Set-Top Box only, then connect the Set-Top Box to the TV.
More IEEE1394 devices can be added to the chain as needed. Each video device can be viewed on the TV's D-Net and information can be sent from any IEEE1394 device to other compatible devices.

DTV STB

Digital VCR
The Hub Connection Option

D-Net (IEEE1394) also permits connecting devices using the TV as a hub. Each device is capable of sending information, which may include audio and video, to any other device on the network.

Other 1394 Device

1394 Monitor   Digital VCR   DTV STB   Digital VCR
4-Pin and 6-Pin Connectors

Two different types of connectors are used for IEEE1394 terminals and cables, a 4-pin and a 6-pin type.

The 4-pin connector sends digital audio, digital video and digital control signals to and from devices. The TV has two available 4-pin connection jacks, of which two are at the back.
The 6-pin connector also sends digital audio, video and control signals, but can also send low voltage electrical power. There are no 6 pin connectors on this TV.

It is not possible to directly connect a 6-pin connector to a 4-pin jack, and vice versa. In order to connect a 6-pin device to a 4-pin device, an adaptor or adaptor cable is required, easily purchased from an electronic or computer store.
Connecting a 6-pin device (such as a camcorder) directly to the TV, (if it is designed to receive electrical power from another 6-pin device) will require that the camcorder is directly connected to the AC supply, or that the camcorder's battery power is used.

Using the D-Net

Selecting a D-Net device

Prior to viewing an IEEE1394 device, it first needs to be selected in the D-Net Device List.

1 Connect the relevant D-Net (IEEE1394) Compatible device in the list.
(See "How to connect compatible IEEE1394 Devices" on page 112)

2 Press the D-Net button on the remote control.

- The TV and all other devices connected on the D-Net (IEEE1394) chain appear in the D-Net device list.
- If "UNCONTROLLABLE" is listed in the device list, the device is not supported by the TV, and cannot be controlled with the TV remote control or the D-Net control panel on the screen.

- The device list is in the order of DTV, STB, AVHDD, DVHS, Camcorder and UNCONTROLLABLE. If there are multiple devices of the same type, the devices will be listed in ascending order of the manufacturer name with Samsung first as the exception. If there are multiple devices of the same type and they are manufactured by the same company, they will be listed in the order of their serial number.

3 Select a connected D-Net device by pressing the ▲ or ▼ button.

- It is possible to connect a D-Net device to another device and to the TV while the TV is ON. The D-Net device list automatically adds the newly-connected device to the list. See "How to connect compatible IEEE1394 Devices", page 112 on connecting D-Net (IEEE1394) Compatible devices.
4 To select a device, press the ENTER button. Then display the D-Net device control panel and operate the selected device.

- At this time, the screen changes to the picture from the selected device.

Follow the instructions below to activate D-Net in the menu.

1   Press the MENU button.
    Press the ENTER button to select "Input".

TV	**Input**	
🔧 **Input**	Source List : TV	▶
🖼 **Picture**	Edit Name	▶
🔊 **Sound**	Anynet	
📺 **Channel**	D-Net	
⚙ **Setup**		
TV GUIDE **Listings**	⬍ Move ▣ Enter ▥ Return	

2   Press the ▲ or ▼ button to select
    "D-Net", then press the ENTER button.

    • The TV and all other devices,
      connected on the D-Net (IEEE1394)
      chain, appear in the D-Net device list.
    • This is also available using the D-Net
      button on the remote control.

TV	**Input**	
🔧 **Input**	Source List : TV	▶
🖼 **Picture**	Edit Name	▶
🔊 **Sound**	Anynet	
📺 **Channel**	D-Net	
⚙ **Setup**		
TV GUIDE **Listings**	⬍ Move ▣ Enter ▥ Return	

3   Press the ▲ or ▼ button to select a
    D-Net (IEEE1394) connected device.

Using the D-Net

The D-Net control panel

Select an IEEE1394 from the D-Net device list. The TV will then display the D-Net control panel. This panel allows you to use the TV remote control to control the selected IEEE1394 device.
1 Press the D-Net button on the remote control.

2 Press the ▲ or ▼ button to select a
   D-Net (IEEE1394) connected device.
   Press the ENTER button.

   • The D-Net control panel appears on the
     bottom of the screen.

3 Use the ▲, ▼, ◄, ► buttons on the remote
   control to move through the options (see next
   page) available in the D-Net control panel.

4 Press the ENTER button to select an option.

5 To view the IEEE1394 device in FULL SCREEN,
   press the EXIT button on the remote control.

   • To exit D-Net mode, select DTV from the
     D-Net device list or press the SOURCE
     button on the remote control.

NOTE

• For information about how to use the icons, refer to the following page.

Control Panel ( )

Button	Name	To do this
	Return	Move to the previous menu.
	Target	Start and stop recording a Digital stream.
	Program List	Display the AVHDD program list.
	Play	Play the digital stream from the selected digital device.
	Stop	Stop the digital stream from the selected digital device.
	Rewind	Fast rewind a digital stream from the selected digital device.
	Forward	Fast forward a digital stream from the selected digital device.
	Device menu	Display the EIA-775 OSD receive to connected 1394 device. Display only EIA-775 support device.
	Power	Turn the Power of the selected device ON/OFF.
	Go to recording position	When in time shift mode on AVHDD, this moves to the recording position.
	Recording	Display only Camcoder recordings.
	Pause	Pause Play.
	Recording stop	Display only AVHDD recordings.

NOTES

- *Press the ▲, ▼, ◄, ► buttons on the remote control to select a control panel button and press the ENTER button on the remote control.*
- *Depending on the device being controlled, not all options on the D-Net control panel may be available.*
- *The selected IEEE1394 device and its functions can be controlled through the equivalent buttons on the TV's remote control.*
- *Not all functions are supported for all IEEE1394 devices.*
- *It is possible to use direct keys on the remote control (rewind, stop, play/pause, fast forward) to control external devices.*

* **What is EIA-775** : *EIA-775 is an OSD standard that enables the control of external 1394 devices by functions such as Play, Stop, etc.*
* **What is CEA-931** : *This is a standard for controlling external IEEE 1394 devices with the TV remote control and not the remote control of the external device.*
  For example, to play DVHS, and you press the Play button of the TV instead of the Play button of the DVHS, the Play command is transmitted to the DVHA through the IEEE 1394 connection.

Using the D-Net

Operating Tips

1) When the screen is switched to the TV program.
   - When you select the first button, the TV button, in the Device List, it switches to the TV program.
   - Although you have selected another device from the Device List, if detecting a video signal from the device fails, the "Connection failed" message appears and the screen automatically switches to the TV program.
   - When the 1394 connection to the selected device is disconnected, the screen automatically switches to the TV program. If you reconnect the device, the reconnected device is automatically selected.

2) AVHDD, DVHS and camcorders automatically stop when you select another device while watching one of the devices.

3) Some devices may be displayed in the Device List as 'UNCONTROLLABLE'.
   This may happen when the device does not contain the proper information or it cannot read.

4) Some devices may not be recognized and may be disconnected from the 1394 connection when they are turned off.

5) When connecting another TV, the TV may transmit *Digital TS which appears in the TV or another picture (e.g. Only RF may be transmitted, although DVHS is being displayed on the screen) depending on the TV specifications.

* **What is Digital TS** : DTV packages digital data (video, audio and data) into 188 byte units using the MPEG-2 algorithm and transmits the data unit unlike for analog. It is called Digital Transport Stream or Digital TS.

6) When connected to another STB, some STB's may not be displayed in the Device List due to device specifications or defects when multiple devices are connected.
   Even if the device is displayed in the Device List, the connection to the device may fail. Otherwise, due to STB trouble, the video stream may be stopped while recording, or the recording may fail. In this case, you have to discover which device is defective by removing the devices one by one.

7) When connected to the AVHDD
   - To rotate the AVHDD disc, there may a time delay.
   - Some AVHDD's may provide two playbacks or recordings simultaneously. In this case, there may be two Play icons in the Program List and 2 AVHDD buttons in the Target List.
   - If you copy a program from the Program List, the selected AVHDD program is played on the TV screen and recorded using the device selected from the Target List.
     Even if the program reaches its end, the recording device does not stop automatically.
   - Some AVHDD's may display the wrong program information after recording, depending on the situation.
   - If AVHDD is recording, the program is automatically played which is currently being recorded, when it is selected from the Device List. (PVR function)
   - For the "Go to recording position" button operation, the difference between recording and play time must be longer than 30 seconds.

8) When connected to DVHS
   - Some devices support an automatic connect function (I-mode). These devices may cause a malfunction when multiple devices are connected.
   - Some DVHS devices may not record properly when multiple devices are connected and the mode is I-mode.

9) When connected to a camcorder
   - Depending on if the camcorder is in Tape or Camera Mode, the control panel changes.
     If the camcorder turns off the power (power saving mode), the camcorder may disappear from the Device List.

10) When multiple devices are connected, some devices may appear and then disappear periodically in the Device List. This is because some devices malfunction when multiple devices are connected.

If this occurs, you have to discover and remove the defective device from the connection by removing the devices one by one.

11) When multiple devices are connected, the response time may be relatively long when selecting a device. This may happen when there is a device(s) that malfunctions and degrades the 1394 connection speed.
At this time, some of the functions of AVHDD or DVHS may not work, and the stream connection may fail. If this occurs, you have to discover and remove the defective device from the connection by removing the devices one by one.

12) Copy Protection
- You can record a Copy-Free, or Copy-One-Generation screen.
- Although you cannot record a Copy-No-More, or Copy-Never screen, you can view it through another device.
- If you change the channel to a 'copy never' channel while recording a 'copy free' channel, the recording is automatically stopped in some devices. Even if the program was recorded, you will not be able to view the recorded 'copy never' channel. At this time, therefore, the user has to manually stop the recording.

Copy information

Message	Descriptions
Copy_free	Able to copy.
No_more_copies	Unable to copy anymore.
Copy_one_generation	Able to copy once.
Copy_never	Unable to copy.

13) When multiple devices are connected, and a device malfunctions while playing DVHS or AVHDD, the user may experience interrupted screen play.

14) When playing and recording a program simultaneously using AVHDD, and the program is copy protected, the program may not play depending on whether the AVHDD device supports simultaneous copy protection.

15) When AVHDD or DVHS is being played, and you press the Pause button, some products may show the "No Signal or Weak Signal" message on the TV screen instead of a still picture as there is no video stream from the product.

16) If the number of connected IEEE 1394 devices exceeds 10, it may cause abnormal operation.
- Yes and Play may not operate smoothly, if you play after recording.
- Yes and the Play, Record and Copy functions do not work properly.
- Disconnect the malfunctioning device and then try again.

Using the D-Net

Recording Tips

1) Recording using the Target List while also watching the screen being recorded.
   - Check that the AVHDD and DVHS devices are connected.
   - Select a source device to be recorded and press the Target button.
   - Select a device to be recorded from the Target List.

2) Recording a program in the Program List of AVHDD using another device.
   - Select an AVHDD program to be recorded from the Program List and press Copy.
   - Select the target device from the Target List.

   ### NOTES
   - *In this case, the selected program is automatically played and displayed on the TV screen and the target device automatically starts recording.*
   - *Controlling a device with another device's remote control or through manual operation, may cause a malfunction when controlling a device through the TV. When copying a program, the recording will not stop automatically when the program reaches its end.*
   - *Although you can make a recording to connected devices regardless of copy protection, you may not be able to watch the copy-protected recording as the playback picture may be distorted.*
   - *When recording an HD program on cable TV or from satellite, programs on some channels may not be recorded if the program exceeds the limit of the allowable range of recording devices such as D-VHS.*
   - *If a recording is in process and another command is issued while the "Recording..." D-Net Notice is displayed on the screen, the recording may fail.*

Tips on stopping recording

1) In general, you can instantly evaluate the current recording device through the Target List. If you select a device that you wish to stop, a message appears asking if you really want to stop recording.

2) For DVHS. If you select a recording DVHS from the Device List, a message appears asking if you really want to stop recording.

3) For AVHDD, if the program currently being recorded is selected, you can stop the recording using the Recording stop button.

   ### NOTE
   - *Controlling a device through another device or through a manual operation may cause a malfunction when controlling a device through the TV.*

Troubleshooting (D-Net)

Problem	Possible Solution
The device is displayed as being "UNCONTROLLABLE".	Only DTVs, STBs, AVHDDs, DVHSs and MPEG camcorder IEEE 1394 devices are controllable. Other devices will display "UNCONTROLLABLE" in the device list. Some supported devices may display as "UNCONTROLLABLE" due to an initialization error. → If a device is supported but is displayed as "UNCONTROLLABLE", reconnect the 1394 cable. If this does not work, this is because the information about the device is unreadable due to an internal error.
A connected device is not displayed in the device list.	A device, which has experienced an error during initialization, may malfunction and affect the operation of other connected devices. Other devices may not be displayed in the list. → Disconnect and reconnect the1394 cable. → Remove a device which does not guarantee compatibility when multiple devices are connected.
"Check the connection with IEEE 1394 cable." message appears.	This message appears when there is a problem with the connected device or the 1394 cable. Initialization might fail when multiple devices are connected due to limitations of some connected devices. → Check that the 1394 cable is making a loop and reconnect the 1394 cable. Check that cables are correctly connected to all connected devices. This message may appear due to an operating error of the 1394 port of a particular device.
"Connection is failed. Exceeds the limit of 1394 network connection." message appears.	IEEE 1394 supports a limited number of screen connections. This message appears when the limit has been exceeded. → Stop unnecessary operations such as playing, recording, etc. and try it again. Turn the auto screen connection function (I-mode) of DVHS devices OFF, and retry. If a camcorder is connected and it is not currently being used, turn it off or disconnect it from the 1394 network.

Continued…

Using the D-Net

Problem	Possible Solution
"Connection is failed. 1394 network speed is not compatible." message appears.	This message appears when the connection speed of the connected device and the device selected from the Target List are different when copying data. → Connect a low speed device between the two devices. (See figure) ※ A 1394 device has a maximum connection speed which will be marked near the IEEE 1394 connector with an "S" number (i.e., S100,S200,S400). The higher the number, the faster the maximum connection speed. This TV has a maximum connection speed of S400.
"This device is occupied by another device." message appears.	This message appears when you try to record a device, which is currently being recorded manually or by another device, through the TV. → Stop the recording device and retry.
"Authentication is failed" message appears.	Check that the connected device supports DTCP.
"Recording is prevented." message appears.	This message appears when trying to copy protected content.
Although DV Camcorder is in the device list, no picture is displayed on the screen when the DV camcorder is selected.	Although a camcorder which supports the DV format appears in the device list, you cannot watch video from the camcorder even if you select the camcorder as an input source, because the TV supports the MPEG format only.
Continued…

Problem	Possible Solution
No picture on the screen after selecting a device	Check if the current mode for DTV and STB is set to analog by mistake. For AVHDD, check if the played content reaches to the end. (Select the item from the content list again.) For DVHS, check if a D-VHS tape is being used. If the camcorder supports the DV format, no picture will be displayed on the screen.
"Initializing D-Net" message appears.	This message appears when the D-Net function is being initialized. Retry after a short wait to use the D-Net function.
"Exceeds the limit of device numbers." message appears.	This message appears when the number of currently connected D-Net devices exceeds 10. Retry after disconnecting unnecessary devices.
"Recordable device is not connected" message appears.	This message appears when the recordable device is not on the network when you try to make a recording using a D-Net device. Retry after connecting a recordable device (DVHS, AVHDD).
"Not available while recording" message appears	The message appears informing you that you cannot change the channels or change the input source using the remote control because a recording is in progress through D-Net. Retry after stopping the current recording through D-Net.
"The connected device is unavailable to perform this function for temporary problems." message appears.	This message appears when the selected function is not supported by the relevant device or the relevant device cannot execute the selected function. Most STB's, DTV's and camcorders do not support the power on/off command. This message may appear when you issue the power command for these devices. This message also appears when the command is supported but the relevant device cannot follow the command. Retry after checking the current mode of the relevant device.
D-Net cannot record the picture of analog channels or peripheral equipments for the input source, except TV.	This message appears when the user presses the RECORD button in analog mode. D-Net only supports recording for digital.
"Not available format is selected." message appears.	This message appears when the selected device does not support the MPEG format. At present, D-Net supports MPEG TS only.

Continued…

Using the D-Net

Problem	Possible Solution
This device is unavailable for D-Net.	This message appears if you have connected a 1394 device or equipment other than a supported device (DVHS, DTV, STB, AVHDD, Camcorder), or if the connected device does not support the AVC defined in the 1394 specifications, even if the device is a supported device, when you have selected the device to use it.
Connection failed. Check if the 1394 cable is connected.	This message appears if there is a connection problem when trying to use a D-Net device.
Initializing…	This message appears if the AVHDD is booting when trying to use the AVHDD.
Please wait. A recordable device is on standby.	This message appears if the recording device is turned off when trying to record using the D-Net device. Please wait a moment until it is turned on.
Connection failed. The device is not responding.	This message appears if there is a connection problem when trying to use a D-Net device. This message appears when the response of the component device malfunctions or is incorrect.
No space left on disc.	This message appears if the AVHDD has no space to record.
The D-NET ERROR message appears on the screen.	Although you have connected external devices according to the procedures described in the manual to use the D-Net function, the D-NET ERROR message may appear on the screen. In this case, check to see if the jacks are damaged.

Using Your TV as a Computer (PC) Display

How to Connect Your PC to the TV

This figure shows the Standard Connector-jack panel. The actual configuration on your TV may be different, depending on the model.

Connecting a PC (15p D-SUB) to the TV

1 Connect a PC cable between the PC Output jack on the PC and the RGB input jack (PC IN) on the TV.

2 Connect a Audio cable between the Audio jack on the PC and the Audio input jacks (PC AUDIO IN) on the TV.

TV Rear Panel

Audio Cable

15Pin(D-Sub) Cable

PC
Setting up Your PC Software (Windows only)

The Windows display-settings for a typical computer are shown below. But the actual screens on your PC will probably be different, depending upon your particular version of Windows and your particular video card. But even if your actual screens look different, the same, basic set-up information will apply in almost all cases. (If not, contact your computer manufacturer or Samsung Dealer.)

1. Right click the mouse on the Windows Desktop, then click on Properties. The Display Dialog-Box will be displayed.

2 Click on Settings, then set the Display Mode with reference to the Display Modes Table. You do not need to change the Colors settings.

3 Click on Advanced. A new settings dialog box will be displayed.

4 Click on the Monitor tab, then set the Screen Refresh Rate with reference to the Display Modes Table. Set the Vertical Frequency and Horizontal Frequency individually if you can do so, instead of setting the Screen Refresh Rate.

5 Press the OK button, close the window, then press the OK button on the Display Registration Information window. Automatic re-booting may commence at this moment.

6 Shutdown the PC, and connect it to your TV.
* The actual screens on your PC may look different, depending on your particular version of Windows and the type of your PC.
* When you use your TV as a PC monitor, it supports Colors up to 32 bits.
* In this case, the display on the TV may look different depending on your particular version of Windows or the PC manufacturer.
* When connecting a PC, you must set it to the display settings that are supported by the TV. Otherwise, the message Out of input range will be displayed.

PC Display

Checklist Before Connecting to a PC

• Adjust the PC Display Setup to the resolution and frequency values that are supported by the TV.

• Please read the user's manual provided with the PC (Graphic Card & Sound Card).

• Do not supply power to either device until all connections are complete.
 Supplying power in the middle of connecting may cause damage to the product.

• Check the terminal types for the PC's graphic card.

Setting the Display Modes to be Compatible with Your TV

Mode	Resolution	Vertical Frequency [Hz]	Horizontal Frequency [KHz]	Vertical Polarity	Horizontal Polarity
IBM	640 x 350	70.086	31.469	N	P
	720 x 400	70.087	31.469	P	N
VESA	640 x 480	59.940	31.469	N	N
		72.809	37.861	N	N
		75.000	37.500	N	N
	800 x 600	56.250	35.156	P/N	P/N
		60.317	37.897	P	P
		72.188	48.077	P	P
		75.000	46.875	P	P
	1024 x 768	60.004	48.363	N	N
		70.069	56.476	N	N
		75.029	60.023	P	P
	1280 x 1024	60.020	63.981	P	P
		75.025	79.976	P	P
	1920 x 1080	59.988	66.647	N	P

NOTES

• The Modes Table conforms to the regulations of IBM/VESA and is prepared based on analog input standards.

• The optimal resolution is 1920 x 1080 @ 60Hz.

• The optimal timing per each mode is the Vertical Frequency 60Hz.

• Resolutions other than the resolutions above are not supported in PC mode.

• Although the OSD menu may shake when selecting a PC input of 1920 x 1080, this is not a defect. Therefore, please use the unit as usual.

Adjusting the Picture Quality

The purpose of picture quality adjustment is to remove or reduce picture noise. If the noise is not removed by fine tuning alone, then do the frequency adjustments to the utmost and fine tune again. After the noise has been reduced, re-adjust the picture so that it is aligned on the center of screen.

1 Press the SOURCE button to select "PC".

2 Press the MENU button. Press the ▲ or ▼ button to select "Setup", then press the ENTER button.

Replacing the Lamp

- **Why do I need to replace the lamp?**
  The lamp used in a DLP TV has a limited lifespan. For the best screen quality it needs to be replaced periodically. After replacing the lamp, the screen quality will be bright and clear as new.

- **When do I need to replace it?**
  This should be replaced when the screen becomes darker, less clear or the ⚠ icon appears.

- **Check before lamp replacement**
  1. The lamp must be the same code number and type.
  2. The lamp type is indicated on the side of the TV. It is also indicated on the lamp case.
  3. After checking the code number for the lamp, give the code number to the store where you purchased the TV or to a Samsung Service center.

- **Caution**
  1. Replace with the correct code numbered lamp to avoid damage to the TV.
  2. Turn the power off and wait for 30 minutes before replacing the lamp as it will be hot.
  3. Do not touch the glass part of the lamp with your bare hands nor insert any foreign object inside the cover as it may cause poor screen quality, electric shock or fire.
  4. Do not place the old lamp near flammable objects or within the reach of children.
  5. Be sure to connect this TV directly to an AC wall outlet. If the TV's AC plug is connected to a cable box or other source, it will not allow for proper cool down time.

• For replacement, you will need a 5.91-Inch screwdriver and a pair of gloves.

1 Unplug TV, then use a
   screwdriver to remove the
   screws.

2 Remove the Lamp cover.

3 Remove the 2 press-pin
   screws securing the Lamp.

4 Separate the Lamp from the
   engine by holding the handle
   and pulling it out.

5 To reinstall the Lamp, follow
   these steps in reverse order.

NOTES

- *Be sure the replacement Lamp is the same type.*
- *After replacing the lamp, align the lamp cover with the groove and secure the screws.*
- *The TV will not turn on if the lamp cover is not correctly closed (as this will activate the protective circuit).*

Appendix

Troubleshooting

If the TV seems to have a problem, first try this list of possible problems and solutions. If none of these troubleshooting tips apply, then call your nearest Samsung authorized service center.

Problem	Possible Solution
Poor picture quality.	Try another channel. Adjust the antenna. Check all wire connections.
Poor sound quality.	Try another channel. Adjust the antenna. Make sure the MUTE button is off.
No picture or sound.	Try another channel. Press the SOURCE button. Make sure the TV is plugged in. Check the antenna connections. Check that the Mute feature is off.
No color, wrong colors or tints.	Make sure the program is broadcasted in color. Adjust the picture settings.
Picture rolls vertically.	Adjust the antenna. Check all wire connections. If you are using a VCR, check the tracking.
The TV operates erratically.	Unplug the TV for 30 seconds, then try operating it again.
Your remote control does not operate your TV.	Press the MODE button to put your remote control into TV mode. Make sure the remote has batteries.
The TV won't switch on.	Make sure the wall outlet is working. Make sure the TV is plugged in. Make sure the remote has batteries.
Digital broadcasting screen problem.	Please check the digital signal strength and input antenna.
There is a "clicking" sound repeatedly in Standby mode.	There is a sound when both Air and Cable are set to "Yes" in the TV Guide On Screen™ Setup. The sound is made by the TV trying to receive TV Guide On Screen™ data in Standby mode, and is not a defect. Set up the Antenna (Air)/Cable according to the connection status in the TV Guide On Screen™ Setup.

Problem	Possible Solution
The visual quality of 1080p will appear the same as for other DTV resolutions.	This TV receives a signal input and converts the signal into 1080p through signal processing. Although the resolution of this TV is 1920 x 1080, to watch TV with a higher visual quality and sharpness than a conventional TV, you can watch TV in a better visual quality when the input signal resolution is 1080p.
I want to view the clearest picture on the TV in 1080p resolution.	The best visual quality is supported for 1080p input signal. → To view TV in the best visual quality of 1080p, connect to a PC whose graphic output is WUXGA (1920 x 1080).
The visual qualities of digital channels vary.	The visual qualities of digital channels may vary depending on the original production method (analog or digital). → Classification by the information displayed when switching channels. → If the original production method is digital: High visual quality program. → If the original production method is analog: The digital program displayed on the screen is originally an analog program which has been converted. The visual quality is of an SD grade.
Although the TV caption shows HD, the visual quality is not satisfactory.	The HD caption that appears when switching channels or when pressing the Information button on the remote control means the selected channel is simply a digital channel. If the broadcasting station converts an analog signal into digital and transmits the signal, the visual quality may not be perfect. (Applied to Set Top Box built-in model only.)

• The display panel used for the DLP TV is composed of many tiny pixels.
  These pixels may occasionally appear on the screen.

Appendix

Cleaning and Maintaining Your TV

With proper care, your TV will give you many years of service. Please follow these guidelines to get the maximum performance from your TV.

Placement
- Do not put the TV near extremely hot, cold, humid or dusty places.
- Do not place the TV near appliances with electric motors that create magnetic fields, such as vacuum cleaners.
- Keep the ventilation openings clear; do not place the TV on a soft surface, such as cloth or paper.
- Place the TV in a vertical position only.

Liquids
- Do not handle liquids near or on the TV. Liquids that spill into it can cause serious damage.

Cabinet
- Never open the cabinet or touch the parts inside.
- Wipe your TV with a clean, dry cloth. Never use water, cleaning fluids, wax, or chemicals.
- Do not put heavy objects on top of the cabinet.
- This DLP TV projects the image onto a large screen by applying an optical system.
  If you place the TV set face down, it might cause a problem because dirt, or some other contaminant may become attached to the inside of the TV set.

Temperature
- If your TV is suddenly moved from a cold to a warm place, unplug the power cord, and allow at least two hours for moisture that may have formed inside the unit to dry completely.

Using Your TV in Another Country

If you plan to take your TV with you to a foreign country, please be aware of the different television systems that are in use around the world. A TV designed for one system may not work properly with another system due to differences in the TV channel frequencies.
